Cogtinuation Sheet (PTOL-303)

Application No. 009/546,174

Continuation of 2.: The proposed amendment introduces subject matter that has not been previously claimed; therefore, the amendment raises new issues that would require further consideration. Furthermore, the proposed amendment raises the issue of new matter that would require further consideration.

Continuation of 5.: Applicants' response has been considered; however, the rejections have been maintained for the reasons set forth within the final Office action and in view of the fact that the response is based on proposed amendments that will not be entered. Furthermore, despite applicants' remarks with respect to the prior art rejection, the examiner has not simply ignored the "uniform thickness" language of claims 50 and 61; this claim language was addressed within paragraph 5 of the final Office action. Additionally, with respect to the rejection set forth within paragraph 9 of the final Office action, support for the language pertaining to "uniform thickness" has not been found within the cited area of the specification, and despite applicants' argument, the language of original claims 1 and 9 does not provide support for the claimed sequence of layers of claim 80. With respect to the rejections set forth within paragraphs 10 and 11 of the final Office action, the position is maintained that the specification lacks definition and enablement with respect to the language regarding the "adjustable etching component"; applicants' argument is insufficient to establish that the specification provides support for the characteristic of the etching component being adjustable and fails to establish that enablement exists for adjusting the etching component.
